SUMMARY

Final-year B.Tech (AI/ML) student with multiple production-deployed projects spanning AI/NLP, computer vision, and developer tooling, plus hands-on experience owning full-stack features for live client products. Proficient in React, Node.js/Express, MongoDB, and REST API design, with experience integrating LLMs and computer vision models into production systems. Seeking Backend, Full-Stack, or AI Engineering opportunities.

EDUCATION

- United Institute of Technology, Prayagraj** Prayagraj, India
B.Tech — Computer Science (AI & ML); GPA: 7.50 2023 – 2027
- Central Board of Secondary Education, Prayagraj** Prayagraj, India
Intermediate (12th) — 70% | High School (10th) — 92% 2020 – 2023

TECHNICAL SKILLS

- Languages:** Java, JavaScript, TypeScript, Python, SQL, C
- Frontend:** React.js, React Router, HTML5, CSS3, Tailwind CSS, Context API, Vite, Three.js, React Three Fiber
- Backend:** Node.js, Express.js, REST APIs, WebSockets, JWT Authentication, FastAPI, bcrypt, BullMQ, Celery
- Databases:** MongoDB (Mongoose ODM), PostgreSQL (pgvector), SQLite, Redis, Firebase
- AI/ML:** Scikit-Learn, Pandas, NumPy, Matplotlib, NLP, Text Classification, Computer Vision (YOLOv8, OpenCV), OCR (Tesseract.js, Google Cloud Vision), Google Cloud Speech-to-Text, LLM Integration (Gemini, OpenAI), Semantic Search/Embeddings
- DevOps, Testing & Tools:** Git, GitHub, Docker, Docker Compose, ngrok, Nginx, GitHub Actions (CI/CD), Jest, Vitest, GCP, VS Code, Postman, Vercel, Render, Railway, Hostinger

PROJECTS

- Vigilant — AI-Powered Real-Time Video Surveillance and Alert System** | GitHub September 2026
 - Architected a three-service system (Python/FastAPI ML microservice, Node.js/Express backend, React/TypeScript frontend) as part of a 4-person team, integrating a teammate-trained YOLOv8 model behind a thin API for independent ML and product deployment
 - Built an end-to-end real-time detection pipeline (capture, inference, zone-containment check, severity scoring, persisted alert) using a custom-trained model achieving 91.44% precision on held-out test data
 - Designed an interactive, resolution-independent zone editor with click-to-place, drag-to-reposition boundaries stored as normalized coordinates instead of fixed pixels, replacing the fragile hardcoded-rectangle approach
 - Pushed live detection alerts from backend to the dashboard frontend in real time over WebSockets, updating the UI instantly without polling or a page refresh
- RepoPilot AI — AI-Powered GitHub Automation Agent** | Live Demo (*login in README*) August 2026
 - Built and deployed a full-stack AI automation platform integrating the GitHub Apps API to auto-triage issues, summarize pull requests, and detect duplicate issues via semantic search (pgvector) instead of keyword matching
 - Designed a model-agnostic LLM abstraction layer (Gemini) with automatic failover and a rule-based fallback, so classification degrades gracefully instead of failing outright
 - Architected an asynchronous job-processing pipeline (Node.js, Express, BullMQ, Redis) to decouple webhook ingestion from AI processing, with idempotency guarantees and dead-letter handling
 - Developed locally with Docker and ngrok to tunnel GitHub webhooks for testing, then containerized the stack for deployment on Railway via a CI/CD pipeline (GitHub Actions) gated on 180+ automated tests (Jest, Vitest)
- Prism — AI-Powered Misinformation & Credibility Analyzer** | Live Demo July 2026
 - Architected and deployed a multi-modal AI credibility platform ingesting 7 content formats (text, URLs, PDFs, DOCX, PPTX, images, audio), using the Gemini API to detect misinformation in real time
 - Built a dual-layer OCR and speech-to-text pipeline (Google Cloud Vision, Tesseract.js fallback, Google Cloud Speech-to-Text) for robust extraction from scanned documents and audio
 - Containerized the stack with Docker Compose and an Nginx reverse proxy; shipped an interactive 3D frontend (Three.js/React Three Fiber) deployed on Vercel and Render

EXPERIENCE

- Daleyork** Remote
Full Stack Developer Intern September 2026 – Present
 - Shipping full-stack features, frontend to backend, across 6+ live client products spanning AI, e-commerce, manufacturing, and ed-tech
 - Owning backend data models, APIs, and third-party integrations end-to-end, deploying features to production via Firebase and Hostinger
- Code Resite** Remote
Full Stack Development Intern July 2025 – August 2025
 - Built and deployed full-stack applications using the MERN stack; explored backend architecture through applied workshops

ACHIEVEMENTS

- Competitive Programming:** Solved 200+ DSA questions on LeetCode and 100+ on GeeksForGeeks
- Leadership & Communication:** Editorial Board Member, UNITIAN Newsletter; active public speaker, House of Orators Club, UIT
- Community:** Top Contributor, GenAI Study Jams and Google Cloud Arcade, GDSC (2024–2025)
- Languages:** English, Hindi; Spanish learner with 1000+ day Duolingo streak
